Culture Media & Consumables Catalogue

Dehydrated Culture Media, Prepared Culture Media, Antibiotic Discs, Supplements & Consumables

Cosmos Biomedical Ltd. is a leading supplier of premium diagnostic products and training materials to health and research institutions in the UK and worldwide.

We stock products ranging from simple test reagents to laboratory analysers and provide a unique education series for CPD in all medical and pathology disciplines.

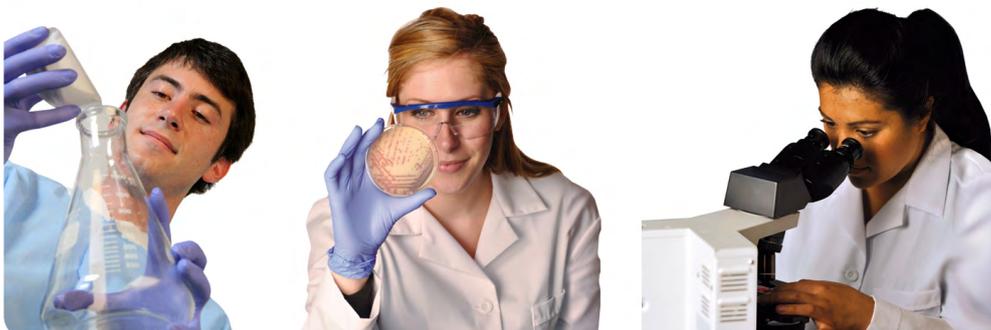

In this catalogue we have collected our wide range of culture media, antibiotic discs, rings and supplements, and consumables.

For our range of diagnostic stains, staining equipment and microscopes, please see our Microscopy & Diagnostic Staining catalogue. And for our range of diagnostic tests and reagents, please see our Laboratory Diagnostic Testing catalogue.

We also provide an extensive range of consumable products including vacuum blood tubes, specimen containers, tips, swabs, cuvettes, pipettes and extensive racking systems.

Cosmos Biomedical prides itself on great customer service, top quality, reliable and affordable products, and detailed knowledge of the scientific and medical fields enabling us to support your work.

Chromogenic Culture Media

Our line of advanced chromogenic, selective and differential culture media, comes direct from Hardy Diagnostics. Chromogenic agar is recommended for use in primary cultivation and isolation of microorganisms.

BluEcoli	ECC	HUrBi	SS	Staph aureus
CRE	E coli O157	Listeria	Sakazakii	UTI
Candida	ESBL	MRSA	Salmonella	Vibrio

BluEcoli™ - Ecoli Chromogenic Plate

HardyCHROM BluEcoli™ is a revolutionary agar plate for economically screening urine specimens for *E. coli*. Inoculate both sides of this biplate with the urine specimen. If the infecting organism is *E. coli*, the colonies on the chromogenic side of the biplate will turn blue.

Since 80-90% of all positive urine cultures are *E. coli*, the BluEcoli™ Urine Biplate is a fast, easy, and cost-effective way of identifying the majority of your urine culture workload.

- The blue colour is confirmatory for *E. coli*. No further confirmation or indole testing is required.
- Save time and money by not using an expensive identification system.
- Select a colony from the blood agar side of the biplate for susceptibility testing.

CRE - Gram-negative Carbapenemase Plate

HardyCHROM™ CRE is used as a primary screening medium for blood, sputum, or urine samples for the simultaneous detection and differentiation of gram-negative bacteria that produce carbapenemase. Carbapenemase producing bacteria will grow on this medium with the following colours:

- *Klebsiella*, *Enterobacter*, and *Serratia* spp. produce large, dark blue colonies.
- *E. coli* produces colonies that are rose to magenta in colour, with darker pink centres.
- *Pseudomonas* spp. produce colourless to light yellow-green, translucent colonies which may have a slight iridescence with crinkled edges.
- *Acinetobacter*, *Salmonella*, and *Stenotrophomonas* spp. produce colonies that are smooth and off-white in colour.
- *Citrobacter* spp. produce dark blue colonies often with a rose halo in the surrounding media.

Clockwise from top left:

E. coli produces colonies that are rose pink to magenta with darker pink centres.
Klebsiella, *Enterobacter*, and *Serratia* spp. produce large dark blue colonies.
Citrobacter spp. produce dark blue colonies, often with a rose halo in the surrounding media.
Pseudomonas spp. produce colourless to light yellow-green, translucent colonies which may have a slight iridescence with crinkled edges.

Candida - Yeast Species Plate

HardyCHROM™ Candida is a selective and differential culture medium that facilitates the isolation and differentiation of clinically important yeast species.

- Useful in detecting mixed yeast infections.
- Inhibits the majority of bacterial species.

ECC - Ecoli Coliforms Plate

HardyCHROM™ ECC (E. coli-Coliforms) is a chromogenic medium recommended for the detection, differentiation, and enumeration of *Escherichia coli* and other coliforms in food, beverage, or water samples based on colony colour.

E. coli can be identified as pink to violet-coloured colonies on the plate, while coliform bacteria will appear as turquoise colonies. Organisms other than coliforms or *E. coli* (including approximately 4% of *E. coli* strains and most O157 strains) will appear as white or colourless colonies.

Ecoli O157 - Ecoli O157 Food/Environmental Plate

HardyCHROM™ O157 is a selective and differential medium recommended for the isolation of *E. coli* O157 from food and environmental sources. Chromogenic substances in the medium facilitate detection by colony colour. Not intended for human diagnostic use.

- ▶ HardyCHROM™ O157 provides an initial screen intended to isolate colonies for further testing.
- ▶ Confirm isolated purple-pink colonies with a latex agglutination test, antisera, or other test methods for complete identification.
- ▶ Testing for the H7 antigen (Cat. no. CB221591, 3ml or Cat. no. CB295569, 5ml) or verotoxin testing may also be required.

HardyCHROM™ Ecoli O157 plate

ESBL - Extended-Spectrum Beta-Lactamase Plate

HardyCHROM™ ESBL is a selective chromogenic medium recommended for the primary screening and differentiation of Extended-Spectrum Beta-Lactamase (ESBL) producing *Enterobacteriaceae*.

- Results in as little as 24 hours.
- Easy-to-read colour read-out.

Citrobacter *spp.*

HUrBi™ - Urine Biplate

HardyCHROM™ HUrBi is formulated to assist in characterizing isolates by isolating gram-positive organisms on one side of the biplate and gram-negative organisms on the other side of the biplate. This plate facilitates the detection and differentiation of common urinary tract microorganisms.

- **Gram Positive & Yeast** - *S. aureus*, *S. epidermis*, *S. saprophyticus*, *Enterococcus* *spp.*, *Candida* *spp.*, *Listeria* *spp.*, *S. algalactiae*
- **Gram Negative** - *Proteus*, *Morganella* & *Providencia* *spp.*, *E. coli*, *KES Group*, *Citrobacter* *spp.*, *Pseudomonas* *spp.*
- **Saves Money** - Reduce the need for expensive automated ID cards.
- **Easy Read-Out** - Distinct colour reactions for each of the common urinary tract pathogens make it easier to detect mixed infections.
- **Confirmatory** - Identify *E. coli* and *Enterococcus* *spp.* with no further testing needed! *Proteus vulgaris* can be confirmed with a single spot indole test.

Listeria - Listeria Plate

HardyCHROM™ Listeria is a premium chromogenic medium recommended for the selective isolation, differentiation, and enumeration of *Listeria monocytogenes* from food and environmental samples.

- All *Listeria* species will produce turquoise colonies.
- *Listeria monocytogenes* and *Listeria ivanovii* will turn turquoise and have white opaque halos.

CBG317

HardyCHROM™ Listeria plate

MRSA - MRSA Plate

HardyCHROM™ MRSA is a selective and differential chromogenic medium recommended for the detection of nasal colonization by methicillin-resistant *Staphylococcus aureus* (MRSA).

Selective agents will inhibit non-MRSA organisms, yeast, and most other Gram-positive cocci.

- Read-out at 24 hours.
- Distinct colour change read-out.
- Bright colour development.
- Economical pricing.
- Compatible with automation.

SS - Salmonella & Shigella Plate

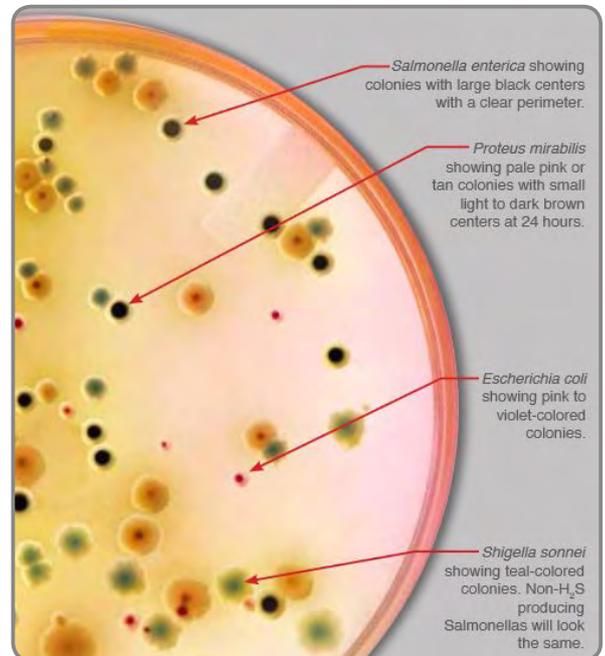

The **first and only** chromogenic stool culture medium for *Salmonella* and *Shigella*!

HardyCHROM™ SS is a highly selective chromogenic medium for the primary screening of stools for the isolation and differentiation of *Salmonella* and *Shigella* spp. Non-pathogenic organisms are easily ruled out based on colony colour or inhibition. Save time and money by avoiding false positives.

Unique patented technology!

- Effectively rules out most *Proteus* spp. and other non-pathogenic non-lactose fermentors.
- Requires less colony picking, sub-culturing, and identification.
- Reduces the number of plates for primary stool setup.
- Reduces labour and material costs by up to 20%.

HardyCHROM™ SS 15x100mm plate, 10 pack
CBG327

Sakazakii - Sakazakii Plate

HardyCHROM™ Sakazakii is a chromogenic medium recommended for the selective isolation and differentiation of *Cronobacter* (*Enterobacter*) *sakazakii* from other members of the *Enterobacteriaceae* family based on colony colour.

- *Cronobacter sakazakii* produces smooth, turquoise colonies.
- Other members of the *Enterobacteriaceae* family will produce white or colourless colonies with or without black centers.
- Most Gram-positive bacteria and yeast will be inhibited on this medium.

HardyCHROM™ Sakazakii 15x100mm plate, 10 pack
CBG315

HardyCHROM™ Sakazakii plate

Salmonella - Salmonella Plate

HardyCHROM™ Salmonella is a chromogenic medium recommended for the selective isolation and differentiation of *Salmonella* spp. from other members of the *Enterobacteriaceae* family based on colony colour.

Selective agents inhibit the growth of Gram-positive organisms.

Salmonella species will produce deep pink to magenta-coloured colonies. Bacteria other than *Salmonella* spp. may produce blue or clear colonies.

HardyCHROM™ Salmonella 15x100mm plate, 10 pack
CBG309

Salmonella enterica

Escherichia coli

Staph aureus - Staphylococcus aureus Plate

HardyCHROM™ Staph aureus allows for the rapid and reliable detection of *Staphylococcus aureus*. This medium contains a special chromogenic mix that allows for the isolation and differentiation of *Staphylococcus* spp.

Staphylococcus aureus can be identified as smooth, pink-coloured colonies on the plate. Other organisms may appear as colourless, blue, or cream colonies, or will be inhibited. *Staphylococcus epidermidis* will be inhibited.

HardyCHROM™ Staph aureus 15x100mm plate, 10 pack

Staphylococcus aureus

Staphylococcus saprophyticus

UTI - Urinary Tract Pathogen Plate

HardyCHROM™ UTI is a chromogenic culture medium that facilitates the isolation and differentiation of urinary tract pathogens. The development of various colours, due to chromogenic substances in the medium, allows for the differentiation of multiple microorganisms from the primary set-up of a urine specimen.

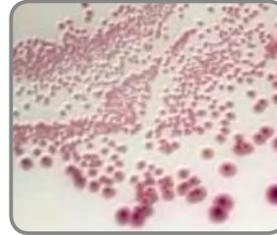

- *E. coli* produces magenta colonies (confirmatory, no further testing required).
- *Enterococcus faecalis/faecium* produces small, turquoise-coloured colonies.
- *Pseudomonas* spp. produce light yellow, translucent colonies.
- *Klebsiella*, *Enterobacter*, and *Serratia* spp. produce large, deep blue colonies.
- *Proteus*, *Morganella*, and *Providencia* spp. produce clear to light yellow colonies with a diffuse golden-orange halo in the medium.
- *S. saprophyticus* produces opaque, pink colonies.
- *S. aureus* produces opaque, white-coloured colonies.
- *Candida albicans* produces small, white-moist colonies.

Vibrio - Vibrio Plate

HardyCHROM™ Vibrio was developed as a medium for differentiating *V. cholerae*, *V. parahaemolyticus*, and *V. vulnificus* from other Vibrios based on colony colour and fluorescence.

The shellfish pathogen *V. parahaemolyticus* is differentiated from other Vibrios such as *V. alginolyticus* by its teal colouration. The deadly pathogens *V. cholerae* and *V. vulnificus* are differentiated from other Vibrios by their magenta colouration, and from each other by the fluorescence of *V. vulnificus* under UV light.

- The only chromogenic media to differentiate *V. cholerae*, *V. parahaemolyticus* and *V. vulnificus* on the same plate.
- Fluorogenic reaction, adds another dimension for thorough differentiation.
- Superior performance to TCBS.
- PCR is very expensive. Screen first on inexpensive HardyCHROM™ Vibrio!
- Also available in CRITERION™ Dehydrated Culture Media.

Supplements & Selective Agents

Lyophilised supplement vials are packed in multiples of 10, each vial consisting of either 500ml, 1 litre, 2 litre or even 3-4 litre pack sizes depending on your ordering preference.

The supplements are presented in a freeze-dried format, and they carry with them a 2-3 year shelf life depending on the antibiotic content. Storage of the products should be in a refrigerator at 2-8°C.

On addition to the appropriate culture medium the content of each vial is mixed and dissolved resulting in the correct level of selective agents.

Diagnostic Staining & Microscopy

Diagnostic Staining & Microscopy

See our Microscopy and Diagnostic Staining Catalogue for our premium quality stains, staining reagents, staining equipment and automation, and our large range of exclusive laboratory microscopes and related accessories for all your needs.

From Gram Stains and Modified Giemsa kits to LCD Screen Microscopes and Microscope Eyepiece Cameras. We can supply free staining kits for evaluation and demonstrations of our high quality and competitively priced microscopes.

RAL Immersion Oil

RAL Immersion Oil is a unique high quality, viscous and non-toxic Immersion Oil with a high refractive index and with no residual fluorescence. Ranging from 10 ml to 100 ml in volume and with bulk discount packs, these bottles are well suited to use with fluorescent or non-fluorescent microscopes in all fields of work.

The unique RAL dropper system is designed for one-handed use, the amount of oil necessary for one glass slide is released by a single easy press. DropSticks® in the RAL Immersion Packs are user-friendly and efficient. The RAL DropStand® rack maintains the dropper bottle ready-for-use, opened and turned upside down.

- **Non-Toxic**, No PCBs, non teratogenic, safe to handle, and conforms to H&S guidelines.
- **Refractive index of glass:** 1,513 +/-0,005 at 25°C, proven clearer, sharper images.
- **No residual fluorescence**, can be used on both light and fluorescent microscopes.
- **High Viscosity:** 1000mPa/s at 25°C, easier to handle, less mess and waste and lasts considerably longer.
- **Unique dropper system** for ease of use.
- **CE Marked**, Health and Safety assured, conforms to all IVD regulatory standards.
- **Available from stock**, next day delivery!
